

# Exercises

## Topic 9 - Interactive Programming

### **Exercise 1:**

Write an I/O program which will read a line of input and test whether the input is a palindrome. The program should 'prompt' the user for its input and also output an appropriate message.

### **Exercise 2:**

Write an I/O program which will read two integers, each on a separate line and output their sum. The program should prompt for input and explain its output.

**Exercise 3:**

Define a function

```
putNtimes :: Integer -> String -> IO ()
```

so that the effect of

```
putNtimes n str
```

is to output a string *str*, *n* times, one per line.

**Hint:** You can use recursion in the definition.

**Exercise 4:**

Write an I/O program which will first read a positive integer, *n*, and then read *n* integers and write their sum. The program should prompt for input and explain its output.

**Hint:** use auxillary functions, e.g.

```
getInteger :: String -> IO Integer
```

```
sumNInts ::      — . . . . which sums n ints
```
